

Using Python in Software for the Medical Industry

Vertebral Fracture Analysis case study

EuroPython/PyCon IT
Firenze, IT
2011 Jun 21

Wesley J. Chun – @wescpy *CyberWeb Consulting*
wescpy@gmail.com <http://cyberwebconsulting.com>

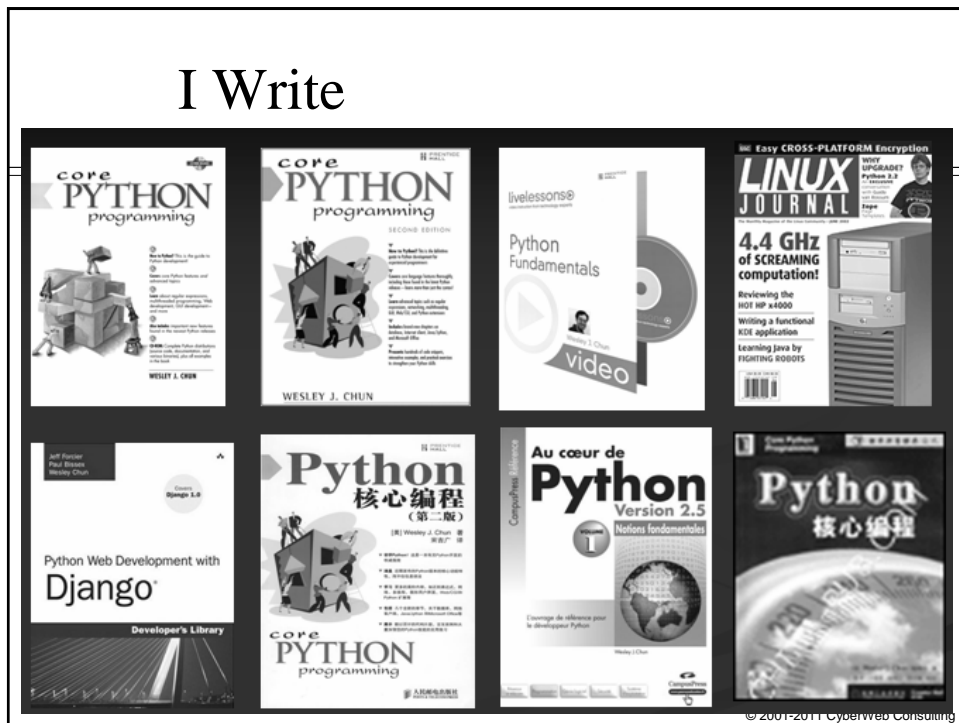

About the Speaker

- Software engineer by profession
 - Currently at Google (cloud products)
- Course instructor: teaching Python since 1998
 - Private Corporate Training & Public Courses
- Community volunteer
 - User groups: BayPIGgies and SF Python Meetup
 - Other: Tutor mailing list; Python conferences
- Author/co-author (books, articles, blog, etc.)
 - *Core Python Programming* ([2009,]2007, 2001)
 - *Python Fundamentals LiveLessons* DVD (2009)
 - *Python Web Development with Django* (2009)

I Teach

I Write

I Code

About this Talk

- Yes, this talk still has some Python in it! ☺
 - Mostly an architectural talk
- This work took place during my tenure at Synarc from 2001-2004
 - Synarc founded in 1998 by merging 4 leading university-based + 2 commercial service providers (CROs)
- Internet and networking senior software engineer transplanted into medical field during dot-bomb era
 - Experience using Python to develop medical apps
 - Gained much medical knowledge and industry insight
 - Still like a fish-out-of-water experience

© 2001-2011 CyberWeb Consulting

Synarc Company Services

- Applications for the following areas in medicine:
 - Oncology
 - Neurodegenerative Disease
 - Osteoporosis
 - Molecular Markers
 - Arthritis and Orthopaedics

- Services (clinical trials: multiple phases)
 - Preliminary
 - Image Procurement and Data Entry
 - Reading Analysis and Patient Assessment
 - Study Completion

© 2001-2011 CyberWeb Consulting

Image Reading System Products

- Radiology image media accepted from sponsors
 - Radiographs (X-Rays)
 - Computer Tomography (CT) “cat scan”
 - Magnetic Resonance Imaging (MRI)

- Application Software
 - Vertebral fracture analysis
 - Knee Joint Space Width
 - Rheumatoid Arthritis

- Used by radiologists and trained technicians

© 2001-2011 CyberWeb Consulting

Synarc Application Software

Rheumatoid Arthritis

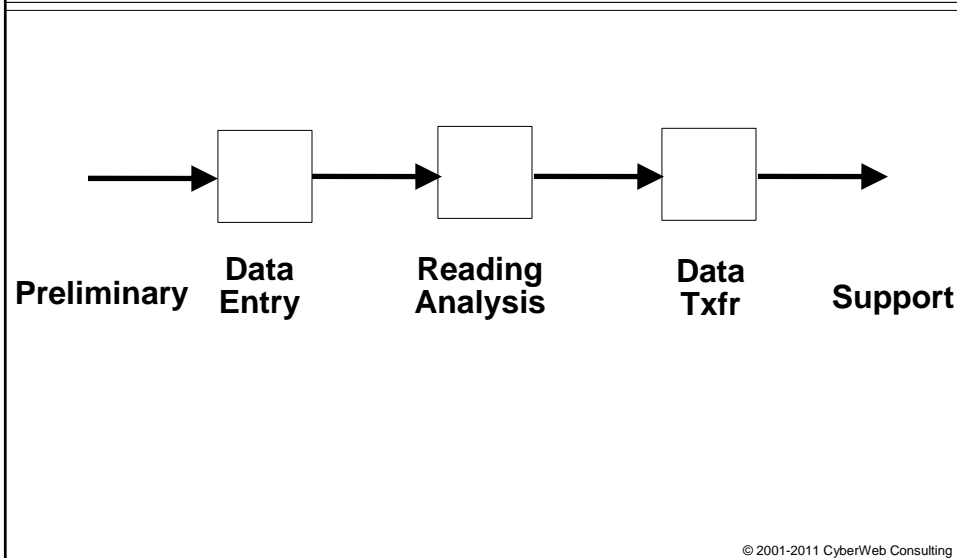

Vertebral Fractures

Knee Joint Space Width

© 2001-2011 CyberWeb Consulting

The image displays three X-ray scans processed by the Synarc software. On the left, a spine X-ray shows a series of white boxes and arrows indicating the detection of vertebral fractures. In the center, a knee joint X-ray has a white line and arrows measuring the joint space width. On the right, a hand X-ray shows a software interface with a 'View: Image' menu and options for 'flip', 'rotate', 'propagate w/l', and 'propagate f/r', demonstrating the software's capabilities for analyzing rheumatoid arthritis.

Process and Data Flow

Motivation/Goals

- Help bring new medicines to market faster
 - But ensure safety and follow FDA guidelines
 - Must publish standard operating procedures
 - (we get audited almost once a month)
- Enable more productivity
 - Empowers doctors and trained technicians
 - Provide suitable substitute for film and film labor
 - Strong attempts to reduce human error
- End users all internal (doctors/technicians)
- Turnaround time critical
 - Contracts were signed years ago
 - Now receiving radiology data (X-rays)

© 2001-2011 CyberWeb Consulting

Focus on Vertebral Fractures

- Assess/diagnosing vertebral fractures
- What is a fracture?
 - Any damage to any bone structure
 - Usually some sort of breakage
 - Can also be loss of structure, i.e., see below
- What is a vertebra? A bone of your spine
 - 3 kinds: cervical (7), thoracic (12), lumbar (5)
 - In total, they make up the spinal or vertebral column
- Main cause of vertebral fractures is *osteoporosis*

© 2001-2011 CyberWeb Consulting

What Are Vertebral Fractures?

- 3 basic types of vertebral fractures
 - Bioconcave (central vertebral deformity)
 - Wedge (mostly anterior/posterior)
 - Crush (all of the above)

- Symptoms
 - Initial severe pain
 - Gradually reduces
 - Wears on (intervertebral) disks
 - Can cause bone growth to form

© 2001-2011 CyberWeb Consulting

Causes of Vertebral Fractures

- Most due to postmenopausal osteoporosis
- What is osteoporosis (porous bone)?
 - **def:** A systematic skeletal disease characterized by low bone mass and microarchitectural or structural deterioration of bone tissue, leading to bone fragility and increased susceptibility to fractures
 - 80% of those affected are female
 - 1:2 women and 1:8 men over age 50
 - 1.5 million osteoporotic fractures annually
 - Almost half are vertebral fractures
 - No "symptoms" of osteoporosis – nothing happens until fracture
 - No known cure, but many believe highly preventable

Vertebral Fracture Analysis Software

- Software customized for each study
 - Keep application stable; customize stored procedures
- Vertebral Fracture system – graphical software app
 - Augments manual assessment via eye and paper
 - Simplifies measurement by radiographic morphometry
 - Expedites analysis of clinical testing of treatments
 - Geared towards vertebral fractures
 - Primary Input: X-Ray (digital image)
- Analysis Modes (4 separate tools):
 - Identification: label vertebrae
 - Assessment: SQ, BSQ, QM

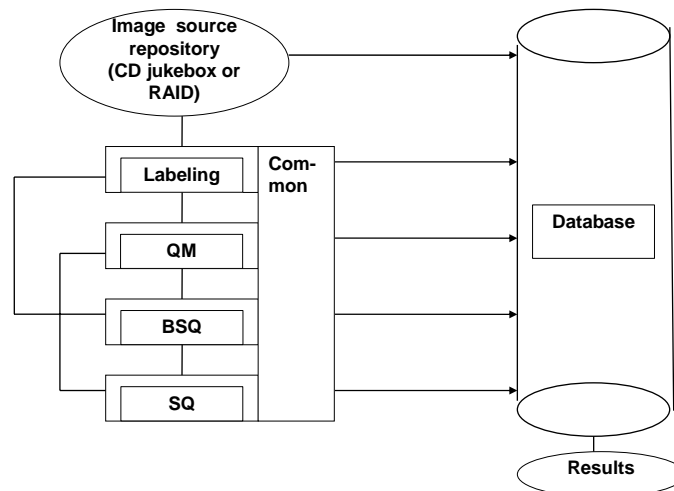

© 2001-2011 CyberWeb Consulting

Reading System

- **Common**
 - Used by all reading system applications
- **Labeling**
 - Vertebral identification
- **Quantitative Morphometry**
 - Measurement via vertebral shape and ratios
- **Semi-Quantitative**
 - Assign grading to fracture severity
- **Binary Semi-Quantitative**
 - Identifies fractures and new or worsened conditions

System Components

© 2001-2011 CyberWeb Consulting

Common Software Components

- Database Interface
 - Low-level common interface to the DB
- Data Manager
 - Manages dataflow b/w applications and DB
- Graphics Libraries
 - XIL – high resolution graphics rendering
 - Should port to OpenXIL or better yet, OpenGL
 - Tk – high-level graphical user interface (GUI)
 - Don't need complex widgets; just mouse-clicks!
 - Tkinter & Pmw – Python interface to Tk
 - Rapid development is a good thing

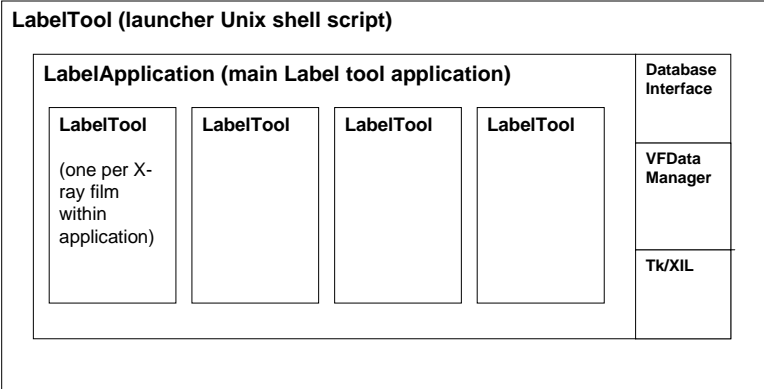

© 2001-2011 CyberWeb Consulting

Labeling

- Process of identifying vertebra
- Three (3) major components:
 - LabelTool.sh (launches the main application)
 - LabelApplication.py (main application tool)
 - LabelTool.py (label tool for each radiograph)
- Not considered assessment
 - No electronic signature required
 - Can be performed by trained technician

© 2001-2011 CyberWeb Consulting

Label Application Architecture

© 2001-2011 CyberWeb Consulting

Quantitative Morphometry

- Measuring the shape of each vertebra

- Calculating the intrabone ratios
 - Anterior / Medial / Posterior heights

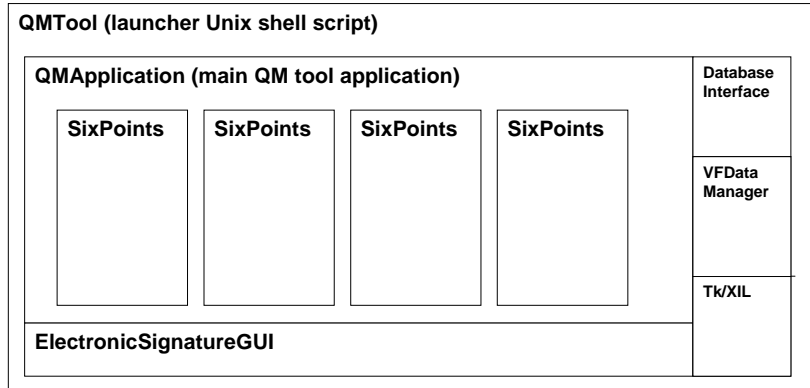

- Three (3) major components:
 - QMTool.sh (launches the main application)
 - QMApplication.py (main application tool)
 - SixPoints.py (QM tool for each radiograph)

- Considered assessment
 - Electronic signature required
 - Can be performed by trained technician

© 2001-2011 CyberWeb Consulting

QM Architecture

© 2001-2011 CyberWeb Consulting

Semi-Quantitative Scoring

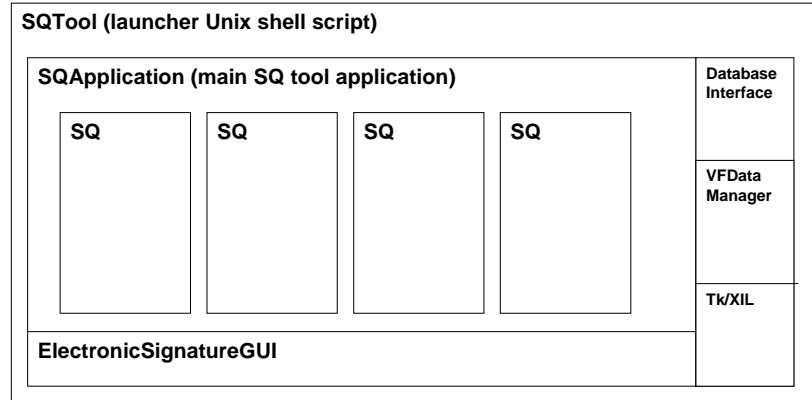

- Grading of vertebral fractures
 - 0, 0.5, 1, 2, 3, N/A (cannot be determined/evaluated)
 - 0 = no/normal, 1 = mild, 2 = moderate, 3 = severe

- Three (3) major components:
 - SQTool.sh (launches the main application)
 - SQApplication.py (main application tool)
 - SQ.py (SQ tool for each radiograph)

- Considered assessment
 - Electronic signature required
 - Must be performed by radiologist

© 2001-2011 CyberWeb Consulting

Semi-Quantitative Architecture

© 2001-2011 CyberWeb Consulting

Binary Semi-Quantitative Scoring

- Identifying vertebral fractures and changes
 - 0, P, N/A (baseline); P = prevalent frx (preexisting)
 - 0, I, N/A (follow-up); I = incident frx (worsening)
- Three (3) major components:
 - BSQTool.sh (launches the main application)
 - BSQApplication.py (main application tool)
 - SQ.py (SQ tool for each radiograph)
 - Software nearly identical to code for SQ
- Considered assessment
 - Electronic signature required
 - Must be performed by radiologist

© 2001-2011 CyberWeb Consulting

BSQ Architecture

BSQTool (launcher Unix shell script)

BSQApplication (main SQ tool application)

Database Interface

VFData Manager

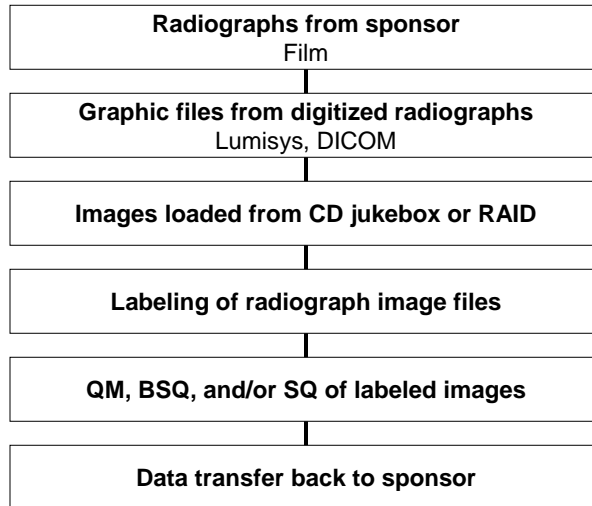

Tk/XIL

ElectronicSignatureGUI

Data Flow

© 2001-2011 CyberWeb Consulting

Software

- Python (primary development language)
 - Tk(inter), Pmw, and Sybase modules
- Other open source tools
 - Tcl, Tk, BLT; Perl, Apache, Samba, various GNU
- Some proprietary tools:
 - MS VB and Access
 - Sybase Transact SQL RDBMS
 - Sun Solaris and XIL high-res imaging library

© 2001-2011 CyberWeb Consulting

Other System Components

- Hardware
 - Sun Microsystems Ultra 10
 - Single color visual monitor
 - Double high-resolution monochrome monitors

- Operating System
 - Sun Microsystems Solaris 8 (SunOS 2.8)

- Data Entry System
 - Assistants input incoming images, patient data
 - Data Entry screens in VB -> Access -> SYBS

© 2001-2011 CyberWeb Consulting

Past, Current, Future

- Why Python?
 - Python chosen for rapid development time
 - Original engineer had 4 months to do it all
 - I rearchitected major pieces, added new features,...

- 80% of all Synarc applications in Python
 - Vertebral Fracture, Joint Space Width
 - Various imaging tools, digitizer, etc.
 - Rheumatoid Arthritis (older app in Tcl/Tk)

- Today: state is not as good
 - A Java-centric came in a forced a rewrite of all tools
 - That was 2004. In 2011, those tools just rolling out
 - Yet original Python tools have been yielding \$\$

Conclusion

- **Python Advantage**
 - Not locked to any particular vendor
 - Variety of development tools – your choice!
 - Ability to deliver mission-critical products
 - Extremely rapid development time
 - High importance given industry timelines
- **And now for something completely different!**
 - Medical software for doctors
 - Perform patient assessments on X-Rays
